

Mobile QA Checklist — Launch OS

All UI changes must be verified against this checklist before shipping.

Viewport Widths to Test

Width	Device Class
320px	iPhone SE / small Android
360px	Android baseline
375px	iPhone 12 mini / iPhone SE 3
390px	iPhone 14 / 15
414px	iPhone Plus / Max
430px	iPhone 14 Pro Max
768px	iPad mini / tablet portrait
1024px	iPad / tablet landscape
1440px	Desktop

Launch OS Dashboard Cards

- ☐ No horizontal scrolling at any width above
- ☐ Gradient header cards (Website Concept, SEO Audit, Google Ads, Posting Plan) display title, description, and CTA without overlap
- ☐ CTA buttons stack below title/description on mobile (< 640px)
- ☐ CTA buttons have min-height 44px for tap targets
- ☐ Description text wraps naturally — no single-word column compression
- ☐ Icons remain visible and do not overlap text
- ☐ Chevron expand/collapse indicators remain accessible
- ☐ Card padding adjusts for mobile (px-4 py-3 on mobile, px-6 py-4 on sm+)

Generated Concept Websites

- ☐ `<meta name="viewport" content="width=device-width, initial-scale=1.0">` present
- ☐ No horizontal scrolling at 320px
- ☐ Hero section stacks cleanly on mobile
- ☐ Navigation collapses or simplifies on mobile (hamburger/stacked)
- ☐ CTA buttons visible, tappable, min 44px height

- [] All images responsive: `max-width: 100%; height: auto;`
- [] Section padding adjusts for mobile
- [] Multi-column sections collapse to single column on mobile
- [] Text does not overflow containers
- [] No fixed pixel widths > 500px on containers (use max-width)
- [] Cards/testimonials/features stack vertically on mobile

Common Anti-Patterns to Catch

1. **flex-shrink-0** on wide buttons inside flex rows — forces siblings to collapse
2. **Missing min-w-0** on flex children with text — text won't truncate/wrap
3. **Fixed width instead of max-width** on containers
4. **flex-nowrap** (default) without mobile override — use `flex-wrap` or `flex-col` on mobile
5. **Absolute positioned CTAs** without mobile breakpoint override
6. **Missing gap** forcing manual margins that break at narrow widths
7. **overflow-hidden** masking layout problems instead of fixing them
8. **Font sizes too large** on mobile — use responsive sizing (text-base sm:text-lg)

Quick DevTools Test

1. Open Chrome DevTools → Toggle Device Toolbar (Ctrl+Shift+M)
2. Select "Responsive" and drag to each width above
3. Check: no horizontal scrollbar, no overlapping elements, all text readable
4. Check: all buttons clickable (not hidden behind other elements)
